

# Tint Direct Online Measurement Worksheet – less than 20 window panels

If you have less than 20 window panels in total, use this worksheet to record your window measurements. You will need to enter this information into our Online Quote Form.

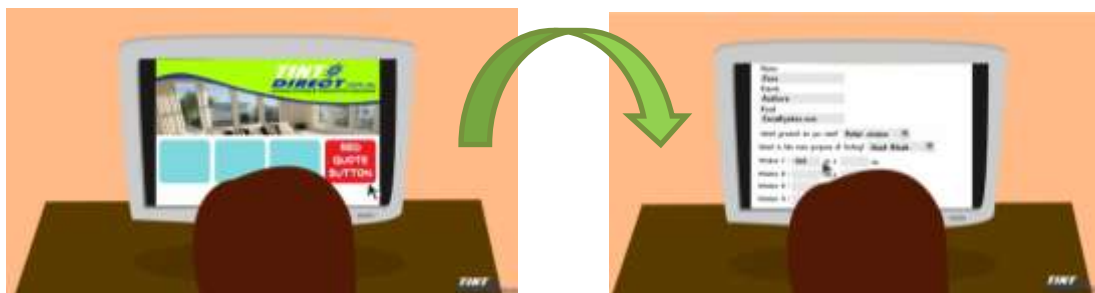

To ensure our quote process is simple and easy our most popular films are all the same price and we don't pre-cut film before we come to your home or office. This allows you to choose the right film at the time of install based on the level of heat reduction or privacy required.

## Step 1: Measure the “daylight size” of your windows

Using a tape measure, measure **every panel** of glass individually (*i.e. 5 panels of glass in the example shown to the right*). This is from the edge of the rubber gasket or timber surround where it meets the glass (or “daylight size”). Round your measurements up to the nearest cm.

## Step 2: Click on the Big Red Quote Button and enter your window measurements and required information into our Online Quote Form

Window panel	Height (cm)	Width (cm)	Timber or Aluminium frame?
